

UNIQUE DESIGNS FOR THE FINISHING TOUCH ON YOUR NEXT PROJECT

Gable Brackets Sizing Charts and Pitch Gauge Guide

Durabrac® Vinyl Gable Brackets are manufactured from high quality natural white vinyl with UV inhibitors and are sized proportionally for today's lifestyle homes. There are currently six styles and three sizes to choose from--available in roof pitches from 4/12 to 12/12.

In the following pages you will find:

- An explanation of roof pitch.
- How to determine your roof pitch.
- Guidelines to help you determine gable bracket size.
- How to order your gable brackets.
- Individual Sizing Charts

An explanation of roof pitch

Roof pitch is the angle or degree of steepness of your roof. Pitch is a standard measure of the angle (slope) of the roof. It is sometimes referred to as "rise to run". For example, a 6/12 (6 on 12) indicates a 6 ft rise in elevation for 12 ft of horizontal length. The higher the first number, the steeper the slope

Exhibit A

How to determine your roof pitch

Do you have the construction plans? If you have the plans, go to the elevation page. There you will find a diagram similar to exhibit A. The 6 is the pitch over 12 as it was built. If you need to accurately determine your roof pitch, use the **printable pitch gauge**. This pitch gauge is used at the lower part of the gable. Follow the instructions carefully to accurately establish your roof pitch.

Copyright © 2006 Classic Design & Manufacturing, Inc. All rights reserved.

You will find a printable left and a right facing gauge at the end of this document.

A few things to remember:

- It is common to have different roof pitches on one house.
- When using the pitch guide, observe by eye that the gable is straight all the way to the peak.
- Avoid taking measurements where wires attach to your structure.

Selecting the Correct Gable Bracket Size

Durabrac® Gable Brackets are available in three sizes. For dormer windows and porch gables, the small Gable Brackets (36 and 42 inches wide) are a good fit. Many of our customers use small gable brackets as interior decorations as well. The medium size brackets (48 to 56 inches wide) are a good choice for small cottages and midsize gables on multi-gable structures. The large gable bracket is designed for today's average and above average size homes or building.

Use the drawing to the right to help you visualize the three sizes that are currently available.

Consider the size of your home and how many stories it has when selecting what size gable bracket will look best.

- To visualize, use chalk or tape and measure out a gable shape full size. Try to do this on a vertical surface where you can step back far enough to see.
- Designs that curves up like Sol Nuevo and Laurel need to be larger than you would think.
- Fleur de la Rua gable brackets are just the opposite; it has a design that drops down and it appears larger.

Ordering your Durabrac® Gable Brackets

When ordering Gable Brackets, select according to roof pitch and size. Width, the distance across the gable bracket measured horizontally, is what you should primarily use to measure or visualize your choice. Height, the measurement down through the center from the highest to the lowest point, changes according to pitch. As the pitch gets steeper the width becomes less and the height increases. A flatter 4/12 pitch at 62 inches wide will have the same visual weight as a steeper 12/12 pitch at 56 inches wide.

Plumb Line →

To use the Durabrac pitch gauge,

- Select and print either a left hand or a right hand pitch gage.
- Push a thumb tack or a push pin through the page at the point where all the pitch lines come together at the top of the plumb line.
- Take the gauge up the ladder to the lower end of the gable (avoid where lines and cables connect to the building)
- Slide the thumb tack or push pin up against the gable. Rotate the pitch gage around the tack or pin until the plumb line is completely vertical.
- Use a level or a string bob to verify the line is straight up and down. Being careful not to move the pitch gage, observe which number pitch line is on or closest to the angle of the gable. That number over twelve is the pitch size you need to order for that particular gable.

Tip! Gluing the pitch gauge to a sheet of construction paper makes it easier to keep flat. Use a marker to extend the pitch lines out to the edge of the page improves accuracy.
